What is in MyCLOUD?

an online platform

The online platform MyCLOUD is supported by three main components, namely Mictionary, My e-Textbook and MyCLOUDNet.

Mictionary

The Mictionary is a 'mobile dictionary' that facilitates students' recording of vocabulary throughout the learning process. Functioning as a **learning e-portfolio**, it allows students to build content around the vocabulary.

My e-Textbook

Powered by Microsoft Bing, text for formal learning is digitised and linked to a **web-based text-to-text speech service**. This enables the system to read the articles aloud. Unfamiliar vocabulary can be highlighted by students to be added into Mictionary.

MyCLOUDNet

In the **social networking space**, students can micro-blog (e.g. photo-blog) and respond to peers' artefacts at the same time. When responding to their peers' artefacts, students have the option to a)improve upon the accuracy and complexity of peer's work or b) conduct casual interactions.
